

1 - With this module, you can precisely control the Attack, Decay, Release, and Sustain of the instrument's overall sound.

2 - Easily select a preset by clicking on the window or using the buttons to go forward or backward.

3 - This module allows you to adjust crucial parameters such as volume, pan, pitch, and filter to achieve the desired sound.

4 - Customize the LFO modulation by setting the rate and depth, choosing its destination (none, pitch, expression, or pan), and selecting the source (none, mod wheel, aftertouch, or velocity).

5 - Enhance the sound further with the Chorus effect module, which includes all the typical parameters of a chorus effect.

6 - Add depth to the sound with the Reverb effect module, which includes all the typical parameters of a reverb effect.

7 - Achieve a unique and powerful sound with the Distortion effect module, which includes all the typical parameters of a distortion effect.

8 - Add depth and dimension to the sound with the Delay effect module, which includes all the typical parameters of a delay effect.

9 - In this section, use the buttons to activate a sound and listen to it, it does not register any MIDI event.

10 - In this section you can adjust the level, pan and pitch of the drum sounds and field recordings.

11 - You can assign each output to a channel of your DAW mixer (see your DAW manual to learn how to do this).
